

**TO:** Professor Bolden  
**FROM:** Matt Kirkland  
**SUBJECT:** CS-383: The First Iteration Specification

## Abstract

This document will summarize my efforts and experiences working with my group on the specification of the first iteration and our general timeline until the finished product.

## Group Meetings

Fortunately, we were given some time in class last week to meet. During this meeting we mostly discussed what our first iteration should be able to do. Once we decided on a list of required functionalities we talked more about what we may want to include in our submission.

We met again on Friday. In this meeting we discussed what use cases each person would make for our first iteration. Generally in this meeting we divided up work to get the document mostly finished. We also decided to meet one more time before the submission was due for our group. We chose to meet Tuesday.

During this meeting, we brought our respective works and documents together in order to craft one complete group submission. We had not yet talked about our general timeline yet. So we took this time to add that piece into our group document as well.

## My Thoughts

Everyone has been doing a great job at pulling their weight. I think we are starting to get a very clear idea on how to begin our coding for the first iteration. I would say that I am very pleased thus far with all of my group members.
